

Week 4 Progress Report

Project: Log File Analyzer for Intrusion Detection

1. Introduction

In Week 4, the focus was on refining the project, improving usability, and preparing it for final deployment and presentation. Enhancements were made to code structure, output formatting, and project documentation to ensure a professional and complete deliverable.

2. Objectives Achieved

- 1 Improved code structure and modularity
- 2 Enhanced output readability with severity labels
- 3 Created project documentation (README)
- 4 Prepared project for GitHub deployment

3. Technical Work

The codebase was cleaned and optimized to improve maintainability. Functions were reviewed and structured into modules for better clarity. Output formatting was enhanced to clearly categorize threats using severity levels such as HIGH and MEDIUM. Additionally, a comprehensive README file was created to document the project, including setup instructions and features. The project was also version-controlled using Git and uploaded to GitHub, enabling proper tracking and sharing.

4. Tools and Technologies Used

- 1 Python 3
- 2 Git & GitHub for version control
- 3 pandas & matplotlib
- 4 Kali Linux environment

5. Outcome

By the end of Week 4, the project was fully completed and polished. It included detection, visualization, reporting, and proper documentation. The project is now ready for demonstration, submission, and further enhancements.

6. Conclusion

Week 4 focused on finalizing and presenting the project in a professional manner. The result is a complete and functional intrusion detection tool with clear documentation and version control integration.
